Project 3 Report

For Project 3 I found this one decently hard! I have never used JavaScript before, so this was my first time learning and implementing it on a website. I was behind on the Zybook assignments, so I had a lot of catching up to do when it comes to JavaScript but the material in the book was very thorough in teaching me everything I needed to know. I also looked up a couple JavaScript guides for beginners on YouTube to really push myself to learn it because it's definitely a valuable language to learn in my opinion. I used Brackets again for my editor and it's for sure a very good and easy to use program. I again tested my website on two browsers: Google Chrome and Microsoft Edge. Both browsers displayed just fine with no issues. I also validated my HTML5 code using https://validator.w3.org/ and I added my Bootstrap from https://www.bootstrapcdn.com/. Some possible improvements to be made to the program include simple things like allowing the use of more than 3 values, preventing users from inputting characters instead of numbers, and more visually pleasing objects on the website because at the moment it is very bare bones. To summarize, Project 3 was quite challenging because I had to learn JavaScript from scratch, but it gave me an excellent opportunity to finally delve into it.
