Project 2 Report

For Project 2 I found this one pretty enjoyable yet a little challenging. The bootstrap section in Zybooks wasn't too descriptive so I looked up a couple of tutorials and templates online. I already had Project 1 completed so copying the information wasn't hard but trying to fit it in the template I found online was a little rough, but I found a way. I used Brackets again for my editor, and it's really growing on me, it's a very good and easy to use program. I again tested my website on two browsers: Google Chrome and Microsoft Edge. Both browsers displayed my website perfectly with no issue. I also validated my HTML5 code using https://validator.w3.org/. The template I used is on https://www.w3schools.com/bootstrap/bootstrap_theme_me.asp. In general, Project 2 was more smooth than Project 1 because a lot of it is just carrying over text in a bootstrap template but it was still fun getting some hands on experience with bootstrap and more or less self-teaching myself what bootstrap is and how it works.
